IEEE SVCE STUDENT BRANCH DECODE AND DEPLOY (2025-2026) REPORT

Decode and Deploy was convened on 25th February 2026 at the Library Function Hall. The event witnessed enthusiastic participation from students across various departments, creating an engaging, competitive, and intellectually stimulating environment. The competition was organized with the objective of promoting analytical thinking, technical competence, innovation, and collaborative learning among participants through a series of challenges in both hardware and software domains. The event provided students with an opportunity to apply their technical knowledge, problem-solving abilities, and teamwork skills in a practical and competitive setting.

The proceedings commenced with a prayer song rendered by Ms. Sivapriya, which created a respectful and positive atmosphere for the event. This was followed by the formal inauguration of the programme by Ms. Janelle Rebecca, Design Team Lead, who delivered the opening remarks and warmly welcomed the participants, faculty members, and organizers present for the occasion. In her address, she highlighted the significance of technical competitions in enhancing students' practical exposure, critical thinking, teamwork, and innovation-driven learning beyond the classroom environment.

The Welcome Address was delivered by Mr. Shriram, who expressed heartfelt gratitude to Dr. K. R. Santha, IEEE Counselor and Vice Principal, and the faculty coordinators for their encouragement and support. He also emphasized the objective of the competition and highlighted the importance of such platforms in strengthening technical knowledge and teamwork among students.

Welcome Address by Mr. Shriram

Following the inaugural address, the overall event framework was explained to the participants by Ms. Sai Raksheedha S, Mr. T. R. Hemachander, and Mr. Dinesh Karthik. The coordinators provided an overview of the structure and flow of the competition, along with the guidelines and evaluation criteria for both hardware and software domains, ensuring clarity and smooth participation throughout the event.

Event framework explained to participants

The proceedings then transitioned to the third floor of the library, where a total of 25 teams enthusiastically participated in the competition. The event was systematically organized into two comprehensive evaluative phases spanning both hardware and software domains, with the objective of assessing the participants' technical knowledge, analytical thinking, creativity, teamwork, and problem-solving abilities. Each phase was carefully designed to challenge the participants through domain-specific tasks and real-time technical scenarios, encouraging them to apply theoretical concepts to practical applications. The competition provided a dynamic platform for students to demonstrate their innovation, technical competence, and collaborative skills while fostering a spirit of healthy competition and experiential learning among the participants.

Participants attentively engaged during the session

The first phase of the event comprised a structured analytical assessment aimed at evaluating the participants' foundational knowledge, critical thinking, and domain-specific problem-solving skills. The assessment included technical and analytical questions aligned with the participants' respective domains. Teams opting for the hardware domain were provided with web-based problem sets designed to assess their understanding of electronics, electrical, and communication concepts. Participants in the software domain were assigned tasks involving CSS design problems, Linux-based operations, coding exercises, and debugging challenges, thereby evaluating their proficiency in software development and system-level problem-solving.

All participants were required to complete the assigned tasks within a stipulated time frame, ensuring efficiency and accuracy under constrained conditions. Performance evaluation was conducted based on predefined criteria, with careful consideration given to correctness, logical approach, and completion time.

Team deliberation during Assessment

The second phase constituted a scenario-driven technical evaluation designed to emulate real-world engineering challenges across diverse contemporary domains, including Software Systems, Embedded Systems, Internet of Things (IoT), Sensors and Actuators, Industrial Automation, Embedded Security Systems, Power Electronics and Energy Systems, Artificial Intelligence, Natural Language Processing, Cloud Computing, Cybersecurity, Data Science, and Machine Learning. Participants were assigned unique, domain-specific scenarios reflecting practical operational, security, and ethical complexities encountered in modern systems.

Teams presenting their assigned scenarios

The problem statements encompassed system-level failures, cybersecurity threats, and algorithmic inconsistencies, including device malfunctions, deepfake-induced misinformation, voice assistant anomalies, ransomware attacks, cloud security breaches, RFID spoofing, and unauthorized IoT access. Additional scenarios addressed reliability concerns such as firmware update failures, continuous integration breakdowns, faulty sensor data, feedback instability, calibration errors, and algorithmic bias, along with ethical challenges involving AI systems and digital platforms.

Teams were allotted a fixed preparation interval to analyze the assigned scenario, identify root causes, and formulate technically robust and feasible solutions. This was followed by a structured presentation involving demonstration and technical justification. The evaluation emphasized analytical depth, solution feasibility, and clarity of technical articulation, effective teamwork, and coherent communication among team members.

Following the completion of both phases, the teams proceeded for the evaluation round, where their performances were assessed based on technical knowledge, analytical thinking, problem-solving approach, and overall presentation.

The First Position was secured by **Team Name**. The team demonstrated outstanding performance through a strong combination of conceptual understanding and practical problem-solving skills. Their approach reflected technical accuracy, structured reasoning, and effective articulation, distinguishing them as the top-performing team in the competition.

Team “Team name” Receiving first Prize

The Second Position was awarded to **Four the Plot**, the team exhibited commendable analytical capabilities and presented well-structured solutions supported by clear technical justification. Their performance reflected a balanced application of theoretical knowledge and practical interpretation of problem scenarios.

Team “Four the plot” Receiving Second Prize

The Third Position was achieved by **TechTitans**, the team demonstrated consistent technical proficiency and effective problem-solving strategies. Their ability to analyze complex scenarios and present coherent solutions contributed significantly to their high ranking and coordinated teamwork.

Team “TechTitans” Receiving Third prize

Apart from the winning team, the teams Hack'hers, One Eleven, and Team Unity Huddle were specially appreciated for their commendable performance and enthusiastic participation throughout the competition. These teams demonstrated strong technical understanding, innovative thinking, effective teamwork, and a well-structured problem-solving approach during both the hardware and software evaluation rounds. Their consistent efforts, active involvement, and ability to approach challenges with confidence and creativity were highly appreciated by the evaluators, earning them special recognition during the event.

The event outcomes reflected strong technical engagement and competitive performance, successfully highlighting participants who demonstrated a balanced integration of conceptual understanding, analytical thinking, and practical problem-solving abilities throughout the competition. The event provided a valuable platform for students to enhance their technical knowledge, teamwork, and innovation-driven learning through practical challenges across both hardware and software domains.

The Vote of Thanks was delivered by Mr. Abrar, who expressed sincere gratitude to Dr. K. R. Santha, IEEE Counselor and Vice Principal, the faculty coordinators, organizing committee members, volunteers, and participants for their constant encouragement, support, and valuable contributions towards the successful conduct of the event. He acknowledged the collective efforts and coordination that ensured the smooth execution of the programme, thereby bringing the event to a formal and meaningful conclusion

Vote of thanks by Mr. Abrar

Submitted to The Principal

Respected Sir,

Sub: Reimbursement of expenditure for Decode and Deploy event-reg

The IEEE Student branch has organized a technical event named "Decode and Deploy" on 25th February, 2026. With the registration fee of Rs.150/- per internal participant team, twenty-five team have participated in the event, (Rs.150x25) = Rs.3750/- were paid by the participant team directly into the college account.

The estimated budget for the conduct of the workshop which has been approved by the Principal on 29/02/2026 is Rs.7000/- (Approval letter enclosed). The actual expenses incurred for the conduct of the program is depicted in the following table.

Sl.No	Item Name	Bill No	Amount (in Rupees)
1	Cash Prize 1 st Prize- Rs.2500/- 2 nd Prize- Rs.1500/- 3 rd Prize- Rs.1000/-	Winners list	5000/-
2	Certificates	31184	177/-
3	Question Paper Photocopies	549	146/-
4	Refreshments	5487	1130/-
	Total		Rs.6453/-

We did not receive any advance amount. Hence, we kindly request you to transfer the Prize amount Rs.5000/- to the winners (Details enclosed) and other expenses Rs.1453/- be reimbursed to IEEE coordinator.

Thanking you,

K.R. Sarth
